Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to an arrangement for generating a digital current measurement signal, classified in class 324, subclass 765.
- II. Claims 17-22, drawn to an impedance circuit for an electrical meter monitoring power usage from a service line, classified in class 324, subclass 117R.

The inventions are distinct, each from the other because:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as an impedance circuit for an electrical meter monitoring power usage from a service line and the meter has a current meter and a transformer See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
